**Permit Applicant Declaration:** The permit applicant certifies that this installation will be completed in accordance with the Alberta Safety Codes Act and Regulations and work will commence within 90 days. The permit applicant/owner acknowledges that as per Section 12(2) of the Alberta Safety Codes Act, Red Deer County is not liable for any decision related to the system of inspections, examinations, evaluations and investigations including but not limited to a decision relating to their frequency and the manner in which they are carried out. **F.O.I.P. Notification:** Personal information is collected under the authority of Section 33(c) of the Alberta Freedom of Information and Protection of Privacy Act and will be protected under Part 2 of that Act and section 63 of the Safety Codes Act. It will be used for processing permit applications, issuing permits, safety codes compliance monitoring and verification. Questions regarding the collection of personal information can be directed to the F.O.I.P. Coordinator 403.350.2150.

## SITE EVALUATION REPORT

The information requested in this document must be submitted with the permit application as required by the Private Sewage Systems Standard of Practice 2009.

A detailed diagram of the site where the sewage system will be installed **must** be included. The following information is to be shown on the diagram and must be to scale:

- Property size (in acres)
- All boundary lines including the lengths in feet or meters
- Buildings, roads, driveways and other property improvements; existing or proposed
- Existing easements
- Wells, cisterns or proposed water source locations on the property
- Surface waters, rock outcrops and drainage features
- Topography of the proposed treatment site \*\*
- Soil test pits locations with surface elevations \*\*
- Location of a permanent benchmark and it's elevation \*\*
- Outline of available treatment areas \*\*

\*\* Not required for the installation of a sewage holding tank.

## SOIL PROFILE REPORTING

The characteristics of each soil profile investigated shall be described using the Canadian System of Soil Classification nomenclature and include the following in the soil profile description: **NOTE:** *Other than Sandy Clay any texture that uses the word SAND in its description must include sand particle size.*

- Soil Horizons** – the distance from the ground surface to the top and bottom of each soil horizon observed shall be measured and distinctness and topography of the horizon boundaries described.
- Soil Color** for each soil lies and identified, the matrix color and quantity, size, contrast, and color of any redoximorphic features present shall be described.

**Texture** for each horizon identified, the soil texture classification including any appropriate texture modifier shall be reflected in this evaluation report and a soil sample of the most restricting layer affecting the design shall be collected and analyzed at a laboratory using a recognized grain or particle size analysis method to determine the texture of the same.

**Soil Structure** and grade of structure identified for each horizon.

A statement regarding the treatment capability and dispersal capacity of the available site(s).

Where the soil profile includes features that will require the lateral movement of water through the soil away from the dispersal system, identified constraints on the system design and allowable effluent hydraulic loading rates, as it relates to linear loading rates.

A summary of the significant limiting conditions of soil profile and site.

A justification of the locations and number of the soil profiles investigated.

A description of the development being served including:

- Characteristics affecting the determination of peak and average wastewater flows to be used in the design,
- The peak daily wastewater flow volume to be used for the system design, and
- Anticipated effluent wastewater strength.

Copies of laboratory soils analysis reports have been attached.

Number of soil profiles investigated; a minimum of two (2) test pit excavations shall be investigated at the proposed location for the soil-based treatment component to classify and assess the treatment capacity of the soil.

Minimum depth of soil investigation (choose appropriate depth as per YOUR design). The soil profiles shall be investigated to a minimum depth below ground surface of:

- 4 feet for Treatment Mounds.
- 9 feet for Treatment Fields receiving primary treated effluent (septic tank effluent).
- 6.5 feet for Treatment Fields receiving secondary treated effluent (treatment plant, sand filter effluent)
- 6 feet for Open Discharge systems.
